

EternaClad™ Premium Wood Siding

For ages mankind has enjoyed the beauty and warmth of wood, especially in the construction of our homes. Early settlers used for both the structure and the exterior. For generations we have enjoyed the beauty and warmth associated with the log cabin. Wood is a material that is both aesthetically appealing and endlessly practical. It is also our only naturally renewable construction resource.

The natural beauty and versatility of wood are fundamental to its universal popularity. When properties such as high strength, light weight and good insulation are required, wood becomes the ideal choice for many applications. It is sad though that these compelling attributes are offset by the susceptibility of wood to deterioration, especially when exposed to the natural elements.

Historically the use of tropical hardwoods and the application of toxic chemicals to nondurable woods have provided a partial solution to the problem. However, the wood's dimensional stability is not improved and toxins create a hazard for humans and the environment.

If an alternative existed which was sourced from sustainable forests, had zero toxicity, provided dimensional stability and long term durability, and provided a long term warranty, a perfect siding material would have been found.

Long ago the Vikings learned the secret to the this perfect wood material. Their secret involved exposing the wood to fire. During the 60's groups of scientists around the world experimented with the Vikings process. They began integrating modern technology into the process by blending heat and steam. By using this combination they were able to improve upon the Vikings original process.

During the last 20 years the process of thermally modifying wood to improve it's durability and dimensional stability has been perfected! By using a proprietary formula of heat and steam, natural wood is modified, without any chemicals, to provide long term durability and improved dimensional stability. With performance credentials and extensive research this material is now available in the U.S. and is called **EcoPrem**.

EcoVantage,LLC takes EcoPrem Wood and shapes and into a variety of siding products. As with all EcoVantage products flexibility of design and installation are of key importance.

Now you can enjoy the warm feel and look of natural wood siding, with the confidence of a 30 year warranty. No other product can provide both the aesthetic beauty of natural wood with the peace of mind that EternaClad and EcoVantage can!

EternaClad comes in a variety of sizes and shapes to provide a wide variety of looks and designs.

Enjoy the simple old fashion German Lap design or the more sophisticated modern look of Ship Lap or the more common Tongue and Groove. Which ever style you choose you will have confidence and peace of mind knowing you have purchased the best, **EternaClad!**

Key Features of EternaClad

- Light Weight
- High Strength
- Sustainable Material
- Zero Toxicity
- Dimensionally Stable
- Outdoor Durability
- Long Term Warranty

30 Year Limited Material Warranty is available for all EternaClad™ products
