DURABILITY

## Thermally Modified Premium Wood Siding

**The warm look and feel of natural wood without the problems!**

EternaClad is coated on (4) sides with Cutek to reduce surface checking and cracking. EcoVantage recommends a second coat of Cutek with an oil based U.V. protectant stain to reduce greying over time. EcoVantage does not endorse, warranty or recommend any specific coating manufacturer. However, Cutek has proven to reduce surface checking and cracking. Applying a second coat of Cutek with an oil-based UV protectant coating will yield the best results (without oil based UV protectant, wood will grey over time).

***EcoVantage offers pre-staining as a custom service!***

## Premium Wood Siding

For ages mankind has enjoyed the beauty and warmth of wood, especially in the construction of our homes. Early settlers used for both the structure and the exterior. For generations we have enjoyed the beauty and warmth associated with the log cabin. Wood is a material that is both aesthetically appealing and endlessly practical. It is also our only naturally renewable construction resource.

The natural beauty and versatility of wood are fundamental to its universal popularity. When properties such as high strength, light weight and good insulation are required, wood becomes the ideal choice for many applications. It is sad though that these compelling attributes are offset by the susceptibility of wood to deterioration, especially when exposed to the natural elements.

Historically the use of tropical hardwoods and the application of toxic chemicals to nondurable woods have provided a partial solution to the problem. However, the wood's dimensional stability is not improved and toxins create a hazard for humans and the environment.

If an alternative existed which was sourced from renewable forests, had zero toxicity, provided dimensional stability, long term durability, and provided a long term warranty, a perfect siding material would have been found.

Long ago the Vikings learned the secret to the this perfect wood material. Their secret involved exposing the wood to fire. During the 1980s, groups of scientists

around the world experimented with the Vikings process. They began integrating modern technology into the process by blending heat and steam.

During the last 20 years, the process of thermally modifying wood to improve its durability and dimensional stability has been perfected! By using a proprietary formula of heat and steam, natural wood is modified, without any chemicals, to provide long term durability and improved dimensional stability. With performance credentials and extensive research this material is now available in the U.S.

EcoVantage, LLC takes our wood and shapes into a variety of EternaClad siding products.

No other product can provide both the aesthetic beauty of natural wood with the peace of mind that EternaClad and EcoVantage can!

EternaClad comes in a variety of sizes and shapes to provide a wide variety of looks and designs.

Enjoy the simple old fashion German Lap design or the more sophisticated modern look of Ship Lap or the more common Tongue and Groove. Which ever style you choose you will have confidence and peace of mind knowing you
